

Accordion Lid Box Instructions

Score the dotted lines well. We used a small embossing stylus, but a metal ball point pen that has run out of ink works great as well.

Cut out the box along the solid lines, the triangles on the inside are easiest to do with an x-acto knife or small box cutter.

Fold the top edge in toward you, creasing well. It is important you do this step before you begin gluing.

When folding the lid, it is almost like an accordion. The fold lines that cut across the middle of the triangles folds towards you like the top edge in the previous step. Flip the box over with the mini print side up and fold the lines that go along the top of the body of the box towards you.

For best results, fold along all your score lines and crease well. When you are done your box should look like this

This is what it looks like when flipped over to the mini print side

Dot glue on the large tab that says "Glue".

Close-up of glue dots. Do not use so much glue that it squishes out when pressed together.

Fold box around so that the opposite edge lines up with the glue tab.

Press together, sliding your fingers inside the box for a firmer press.

Dot glue onto the small tab on the lid.

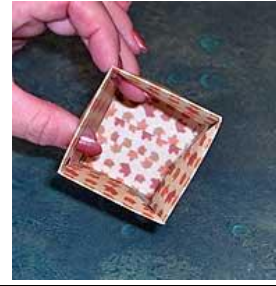

Fold in the tabs marked A and B and slide the bottom tab into the bottom of the box. If you do not wish to use these tabs, there is an alternate way of folding the bottom of the box below using glue.

Fold box lid down and press together as shown. This will help insure that you have not pulled the lid so tight that it can not fit over the box.

Pull the lid up to open the box

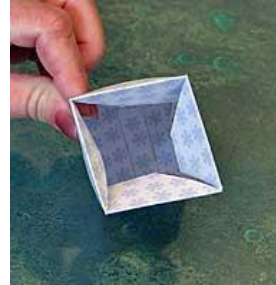

Inside detail showing cute print inside box

Push the lid down to close.

Finished Autumn box.

Alternate Bottom - Cutting Locking Tabs Off and Using Glue

Cut off tabs marked A and B.

Dot glue along tab.

Tuck tab into box and press to seal. It also helps to open box and press along tab with a pencil.

Bottom of box.

Finished box.
